

There's No Substitute for User Experience

"To people who are skeptical about how well the Ladtech rings are going to hold up over time, the best thing I can say is "I was too!" Before we wrote the Ladtech System into our spec and excluded concrete adjustment rings, I tried to destroy them every way I could. I went as far as driving and parking a fully loaded cement truck over them to try and get them to break.

We've been sold on Ladtech rings for over 18 years, so much so that it's the only system we allowed to be installed since 1997. These rings last, and people would be foolish to keep using a concrete and mortar system.

From an engineering standpoint, these rings work. Maintenance and utilities will tell you the same thing. It's the easiest way I know of to have one of the cities' maintenance problems solved immediately. We have installations in place since 1997. Other than a little grime on the rings, they look exactly the same today as the day they were installed."

Jim Fruechtl
Municipal Engineering Field Consultant

Get all the facts:

Contact your Ladtech distributor or Ladtech Inc. today whether you have a current project or want information for the future. We would like to demonstrate how the Ladtech System can upgrade your manhole installations.

Available From:

1/4" spacer ring

How to: Make the Grade Fast!

The Problem:

Needing a fraction-of-an-inch more height to match finished grade can be frustrating and add time and cost to a project.

The Solution:

Spacer rings are used on top of Ladtech adjustable rings to efficiently raise chimney height in 1/4" increments to match finished grade.

Upgrade Your Manhole Installations

Ladtech HDPE System Features Include:

- No mortar and mixing equipment needed
- Ladtech rings weigh approx. 6 Lbs. compared to 85 Lbs. concrete rings
- Broken and wasted concrete rings are a concern of the past
- HDPE is UV and heat resistant; also impervious to highest corrosive compounds common to sanitary sewers
- Callbacks to rework are minimized
- More than 4,000,000 rings in service over 2 decades
- Ring life expectancy up to 100 years

Imagine: Taking virtually all the trial-and-error out of matching finished grade!

Once adjustable rings are installed, the number of 1/4" spacers required for exact chimney height can be quickly and easily added.

1/4" square and rectangular style spacers are also available for Ladtech adjustable catch basin systems.
